

# Adarsh Ravindra Shanbhag

Backend Software Engineer

Bengaluru, Karnataka, India | +91 70197 12764 | [adarshshanbhag5@gmail.com](mailto:adarshshanbhag5@gmail.com)

[linkedin.com/in/adarsh-shanbhag](https://www.linkedin.com/in/adarsh-shanbhag) | [github.com/Adarshshanbhag5](https://github.com/Adarshshanbhag5)

## Summary

Backend engineer with 2+ years building distributed systems across FinTech and B2B SaaS. Currently own the backend powering a wealth-management platform for HNI and UHNI clients, covering portfolio reporting, market data across 18 global exchanges, and multi-asset trading through BNY Pershing FIX. Work primarily in TypeScript and Go on PostgreSQL, Kafka and Temporal.io, owning services from system design through production.

## Technical Skills

**Languages:** TypeScript, JavaScript, Go (Golang), Python, Java, C/C++, SQL

**Backend & APIs:** Node.js, NestJS, Express, REST APIs, WebSockets, Socket.IO, FIX Protocol, Microservices, Event-Driven Architecture, System Design

**Distributed Systems:** Temporal.io (workflow orchestration), AWS MSK, background job processing, idempotent retries

**Databases:** PostgreSQL, MongoDB, DynamoDB, Redis, query optimization, bulk upserts

**Cloud & DevOps:** AWS (EKS, SQS, Lambda, S3, Cognito), Docker, Kubernetes, CI/CD, Git, GitHub Actions

**Frontend:** React.js, Next.js, React Native, Redux/Redux-Saga, Zustand

**Tools:** Postman, Claude Code, Cursor, VS Code, Zed, Jira, Agile/Scrum

## Experience

### Keenai Global

Aug 2025 – Present

#### *Software Engineer, Backend (Wealth Management)*

Bengaluru, India

- Own **Wealth-Core**, the backend service behind the client web and mobile applications for HNI and UHNI investors, serving portfolio, holdings, market data and order placement across **6 asset classes**, from API design through production support.
- Led design and delivery of the **instrument universe and real-time pricing (LTP) service** covering stocks, ETFs and **US equity option chains** across **18 global exchanges** (US, European and Singapore markets), reconciling venue-specific symbology and trading calendars from **LSEG (Refinitiv)** APIs into a single internal contract.
- Built the **market-data ingestion layer** on **Temporal.io**, orchestrating high-volume scheduled and fan-out workflows that keep **option chains, equity fundamentals and company financials** current across the full instrument universe, using durable retries to absorb vendor failures without leaving data gaps.
- Own the **Order Management Service** for US equity-options trading, integrating **BNY Pershing over the FIX protocol** to route orders and process execution reports; orchestrated the full order lifecycle as **Temporal.io** workflows, replacing manual dealer-desk entry with a fully automated order flow.
- Maintain and extend the platform's asynchronous messaging stack: **Kafka (AWS MSK)** for product analytics event streaming, and **AWS EventBridge and SQS** with dedicated consumer workers for portfolio data sync and structured-product lifecycle processing.
- Built the **self-serve KYC onboarding backend** end to end, the platform's highest-throughput flow, integrating **Singpass** for instant identity verification of Singapore residents and **DocuSign** for agreement e-signature; reduced onboarding drop-off by **95%** and time-to-account-open from **15 days to 2**.
- Replaced a legacy Lambda-and-Cognito authentication stack with an in-house **JWT-based auth and session service**, removing per-request cold starts from the login and token-refresh path.

### Rattle Software

Jan 2024 – Aug 2025

#### *Software Development Engineer*

Bengaluru, India

- Owned 50% of a core product codebase serving **50K daily active users** and contributing **\$4M in annual recurring revenue**, cutting customer churn by **90%** through feature delivery, critical bug resolution and direct partnership with customer-facing teams.
- Architected and maintained the **No-Flow (Source-Destination) architecture**, a CRM-agnostic rules engine built on **Temporal.io** that runs incremental data sync every 5 minutes and removes any dependency on native CRM flows; scaled it through sharded workflows, idempotent retries and optimized **PostgreSQL** bulk upserts to process approximately **3 million records per job**.
- Improved customer retention by **60%** by building a **sandbox-to-production migration tool** that let customers validate configuration in sandbox and promote it to production in a single step, replacing an error-prone manual process.

- Owned the **Meeting-DM** feature, delivering contextual Slack notifications enriched with Salesforce data around scheduled meetings; used Temporal.io cron workflows to poll Google Calendar so reps could log calls and create Salesforce tasks without leaving Slack.
- Remediated all vulnerability assessment and penetration testing (VA/PT) findings for the annual **SOC 2** audit across two consecutive cycles, strengthening the platform's security posture year over year.

## Projects

---

**react-native-palette-picker** | *React Native, Android, Java, NPM*

[\[Source Code\]](#)

- Published an open-source NPM library exposing Android's Color Palette API to React Native for dynamic theming; adopted by 200+ projects.

**MusicFumes** | *React Native, TypeScript, Zustand, Java native modules*

[\[Source Code\]](#)

- Built an offline music player for Android handling large local media libraries, using Zustand for state management and custom Java native modules for file-system and playback integration.

## Education

---

**Ramaiah Institute of Technology**

**Aug 2020 – May 2024**

*Bachelor of Engineering, Computer Science; CGPA: **8.45**/10.0*

*Bengaluru, India*
